# Example Exercise:

(If you have read both the annotation schemes. This is a small exercise for you. Read these comments in their html URL [some comments may be hidden. You need to manually click them to expand. Look for "show hidden comments"] and annotate them for their politeness and sentiment rating. Remember, options for politeness rating are: **very polite, polite, neutral, impolite, very impolite** and options for sentiment rating are: **negative, positive, neutral, sarcasm, mixed.** Solutions are at the end of the document)

1. I think this line should be removed. What if we want to test that katello gives a proper error message when the description is left out? We should be able to use this task for such a test.
https://github.com/RedHatQE/katello.auto/pull/64

2. Sorry :) I dont want to hack the system!! :) is there another way?

3. Did that, thanks for the suggestion :)
https://github.com/rmurphey/js-assessment/pull/40

4. This is not needed. It was part of the other fork's implementation. I got rid of it.
https://github.com/Shopify/active_merchant/pull/434

5. Yes, still failing.
https://github.com/blackberry/Ripple-UI/pull/479 [note: it's impossible to judge this comment without looking at the context]

6. Oh, no, not a good idea ;)
https://github.com/everzet/capifony/pull/144

7. put a comment on these saying the unit is pixels
https://github.com/Macadamian/titanium_mobile/pull/97

8. Is this github being stupid?
https://github.com/Khan/khan-exercises/pull/255

Page break. Go to next page for solution 😊

Solution:

1. My opinion:

Politeness: very polite (It uses hedges and indirection to suggest a fix. Also explains why it's necessary)

Sentiment: neutral

2. My opinion:

Politeness: polite (apologetic)

Sentiment: negative (expression of failure/frustration)

3. My opinion:

Politeness: very polite (expressing gratitude with also a positive emoticon. Double strategies used.)

[note: contextually, if the person missed to thank for the suggestion, it would've been deemed impolite]

Sentiment: positive (gratitude, happiness)

4. My opinion:

Politeness: neutral (talking about his own actions)

Sentiment: neutral

5. My opinion:

Politeness: impolite (no use of politeness strategies when pointing to a failure)

Sentiment: negative (failure)

6. politeness: neutral (use of both impolite [use of direct no] and polite [positive emoticon] strategies negate each other)

sentiment: mixed (same reason. But here we annotate as mixed instead of neutral. Sorry for this inconvenience in schemes.)

7.

politeness: impolite (direct order)

sentiment: neutral (no polarity can be detected)

8. politeness: neutral (looking at the context, the sentence isn't directed to any person)

sentiment: negative (frustration, criticism)
